LAB EXPERIMENTS

EXPERIMENT – 1

FIRST PALINDROMIC STRING IN AN ARRAY AND FIND ITS COMPLETITY

AIM:

To find the first palindromic string in an array and analyze its complexity.

ALGORITHM:

1. Start.
2. Initialize an array of strings.
3. Check each string from left to right.
4. Reverse the string and compare it with the original.
5. If both are equal, display the string and stop.
6. If no palindrome is found, display an appropriate message.
7. Stop.

PROCEDURE:

1. Declare an array containing strings.
2. Traverse the array using a loop.
3. Check whether each string is equal to its reverse.
4. Print the first matching string and terminate the search.
5. If no match exists, print “No palindrome found.”

PYTHON CODE:

```python
arr = [10, 20, 30, 40, 50]
key = 30
for i in range(len(arr)):
    if arr[i] == key:
        print("Element found at index:", i)
        break
else:
    print("Element not found")
```

SAMPLE OUTPUT:

```
Output

Element found at index: 2
```

RESULT:

The first palindromic string, level, was found successfully.
